

Trend Micro™

Managed Service Provider Solutions

With Web threats and cybercrime on the rise, there is no other time like the present to be protected with a reliable and trusted suite of security solutions designed not only to safeguard data and keep malware out, but to also keep up with the threats in the first place. Trend Micro Managed Service Provider Solutions is a full range of solutions available on usage-based licensing: Security for Datacenters, Mail and Web Gateway, Data and Communication/Collaboration Servers, and Endpoints. Each avenue that may be attacked has its own list of products designed to safeguard it from any known and unknown threats. With Managed Service Provider Security Solutions, Service Providers can now leverage unparalleled protection without having to deal with the complexity that normally comes with the applications and maintenance of such solutions.

BUSINESS BENEFITS

- Prevents infection, identity theft, data loss, network downtime, lost productivity, and compliance violations
- Reduces IT management costs for customers through award-winning, automated protection, and maintenance
- Easily aligns with the Service Provider's business model and billing cycle given a flexible usage-based pricing
- Enables Service Provider to deliver state-of-the-art solutions without an upgrade process
- Offers continuous access to the most current Trend Micro technologies

DATACENTER SECURITY

Datacenter Security Solutions protect datacenters hosted physically, virtually, or in the cloud; halting malware or Web threats from infecting a datacenter with a real-time, multi-layered approach to protection by stopping them before they can affect your critical systems and data. At the same time, they keep track of incoming and outgoing traffic to screen for suspicious malware-like behavior.

GATEWAY (WEB & MAIL) SECURITY

Gateway (Web & Mail) Security Solutions protect a network while it is exposed to the biggest threat vector of all, the Internet. These security solutions feature maximum protection against spam, malware, malicious links and inappropriate content while having minimal complexity in terms of setup and maintenance.

COLLABORATION & STORAGE SECURITY

Collaboration & Storage Security secures email, instant messaging and collaboration systems in a network—anywhere that sharing of data exists within the company or with external parties. These security solutions ensure that the communication lines in a network are rendered secure and safe, with confidential and critical data protected.

ENDPOINT SECURITY

Endpoint Security Solutions provide protection to all kinds of endpoints—from laptops to desktops and smartphones. These include products that feature effortless installation, smaller resource footprints and zero-maintenance updating and scanning.

TREND MICRO SMART PROTECTION NETWORK

The Trend Micro Smart Protection Network is a next-generation content security infrastructure designed to provide comprehensive protection to users while reducing network and system impact. It correlates email, Web and file reputation information across Trend Micro solutions and leverages the collective knowledge of Trend Micro's vast global customer base. Each new threat identified via a single customer's routine reputation check will automatically update databases around the world. By using centralized systems located in the cloud, information can be processed more quickly, resulting in immediate access to threat intelligence.

ABOUT TREND MICRO

Trend Micro Incorporated, a global leader in Internet content security, focuses on securing the exchange of digital information for businesses and consumers. A pioneer and industry vanguard, Trend Micro is advancing integrated threat management technology to protect operational continuity, personal information, and property from malware, spam, data leaks, and the newest Web threats.
